

# Dokumentasi Katalog Jaya Bakery P.Web II (Kel. Nirwana Santika)

## Topik: Membuat Header dan Navbar

Nama : Jefri Jaka Tirta

NPM : 22312068

Kelas : IF 22 B

## Output:

## Sourcode:

A screenshot of the Visual Studio Code editor interface. The Explorer panel on the left shows the project structure for 'KATALOG-JAYABAKERY', with 'Navbar.tsx' selected under the 'components' folder. The main editor area displays the code for 'Navbar.tsx'. The code uses 'use client' and 'useState' to create a responsive navbar with a toggleable menu. It includes a logo image and a list of navigation links. The bottom panel shows the terminal with git commit and merge messages, and the status bar indicates the file is part of a pull request.

```
1 "use client";
2 // components/Navbar.tsx
3 import React, { useState } from 'react';
4 import Image from 'next/image';
5
6 const Navbar: React.FC = () => {
7   const [isOpen, setIsOpen] = useState(false);
8
9   return (
10     <nav className="bg-[#880000] fixed w-full z-50 shadow-md">
11       <div className="max-w-7xl mx-auto px-4 sm:px-6 lg:px-8">
12         <div className="flex justify-between items-center h-16">
13           { /* Logo */ }
14           <div className="flex-shrink-0">
15             <Image
16               src="/logo.png"
17               alt="Logo"
18               width={45}
19               height={45}
20             />
```

## Deskripsi:

Gambar di atas merupakan proses pembuatan header yang terdapat logo serta navbar yang responsif yang digunakan pada website Jaya Bakery. Header dan navbar ini dirancang untuk memberikan navigasi yang mudah dan tampilan yang menarik pada website.
